BENT BEAMS

TIRE IRON

CRANE

Rigid joints

Beam properties EA , GJ , EI
 rigidities \rightarrow $\underbrace{\hspace{1cm}}$ axial/extensional $\underbrace{\hspace{1cm}}$ torsional $\underbrace{\hspace{1cm}}$ flexural

Global Eqm

Local Eqm

$$\text{At B, disp along } z = \frac{Pa}{AE}$$

$$\text{disp along } x = \frac{-Pba^2}{2EI}$$

Recall

$$\frac{M_0 L^2}{2EI} = u(L)$$

$$\frac{M_0 L}{EI} = \theta(L)$$

$$\text{disp along } y = 0$$

cantilever BCs

Recall,

$$u(L) = \frac{PL^3}{3EI}$$

$$\theta(L) = \frac{PL^2}{2EI}$$

z disp of C

$$= \frac{Pb^3}{3EI} + \frac{Pa}{AE} + \frac{Pba}{EI}b$$

from bending
of BC

extension
of AB

$$x \text{ disp of C} = x \text{ disp of B} = -\frac{Pba^2}{2EI}$$

$$y \text{ disp of C} = 0$$

$$x \text{ disp of } C = \underbrace{\frac{Qb}{AE}}_{\text{extension of BC}} + \underbrace{\frac{Qa^3}{3EI}}_{\text{bending of AB}}$$

$$y \text{ disp of } C = 0$$

$$z \text{ disp of } C = - \underbrace{\frac{Qa^2}{2EI} b}_{\text{rotation at B due to bending of AB}}$$

$x \text{ disp of } C = 0$
 $z \text{ disp of } C = 0$
 $y \text{ disp of } C = \frac{Rb^3}{3EI} + \frac{Ra^3}{3EI} + \frac{Rba^2}{GJ}$

bending of BC
 bending of AB
 twist at B due to torque Rb
